

## SUPPLEMENTARY DATA

**Figure S1.** Representative adult plant showing the appearance of the first tendril.

**Figure S2.** Differential expression between adult and juvenile plants for genes miR156b, miR159c, MYB33 and TOE1, displaying not significant (NS) results. Data are means of (normcounts = log10 of normalized counts) ± standard deviation of three biological replicates. Adjustment of the *p*-value using the False Discovery Rate (FDR) statistical method.
