Table of contents of supplementary data

Readers can find all the data we used in the supplementary data files. This should allow them to verify, reproduce, and even develop methods for their own research.

In all cases, the data are listed with a prefix indicating the figure they refer to, except for “questionnaire” and “chemical analyses of the wines”, which refer to the methods paragraph.

For data sets (.csv) and R scripts (.R), in order to reproduce the analyses with R software (or RStudio), the files need to be downloaded into separate folders—one for each figure. Then the prefixes in the .csv filenames need to be deleted. For example, “Fig1-DataForANOVA.csv” should be renamed “DataForANOVA.csv” and “Fig1-script_ANOVA.R” should be renamed “script_ANOVA.R” so that the R script can process the .csv file. The “Figx-” prefixes were added only for editorial purposes.
